OAE Test in Sagar – Early Hearing Screening for Newborns & Children at Sagar Speech & Hearing Clinic

👶 Introduction

Early detection of hearing loss is essential for a child's speech, language, and cognitive development. Many parents may not realize that **hearing issues can begin right from birth**. To ensure your child's hearing health, the **Otoacoustic Emissions (OAE) Test** is one of the most accurate and painless screening tools available today.

At Sagar Speech & Hearing Clinic, located in *Ashoka Lake View Hotel, Sanichari Hills, Sagar (M.P.)*, we specialize in **OAE hearing screening for newborns and young children** — helping parents detect potential hearing concerns early and take corrective action on time.

🔍 What Is the OAE Test?

OAE (Otoacoustic Emissions) Test is a **non-invasive, quick, and pain-free test** that measures the response of the inner ear (cochlea) to sound.
When a sound is played into the ear, a healthy cochlea produces tiny sounds called "otoacoustic emissions." If these sounds are absent or weak, it could indicate a hearing problem.

This test is especially useful for:

- **Newborn hearing screening** right after birth
- **Infants and toddlers** who cannot respond to standard hearing tests
- **Early identification** of hearing loss before it affects speech development

👶 When Is the OAE Test Recommended?

Your child's hearing should be tested early if:

✅ There is a **family history of hearing loss**
✅ Your baby **did not pass the initial hearing screening** after birth
✅ You suspect **your child is not responding to sounds or voices**
✅ Before fitting a **Cochlear Implant or Hearing Aid**
✅ For **routine screening** of newborns and toddlers

Early detection is crucial — because timely treatment can prevent speech and communication delays.

🔹 How the OAE Test Works

1. A small probe is placed in the baby's ear canal.
2. The probe emits soft clicking sounds.
3. The inner ear's response (emission) is measured by the device.
4. The test takes just a few minutes and is **completely painless**.

It can even be done while your baby is **asleep or calm**, making it one of the safest hearing assessments for infants.

🌟 Benefits of OAE Hearing Test

The OAE test offers several advantages:

- **Quick and accurate results**
- **No discomfort or pain**
- **Can be performed shortly after birth**
- **Detects hearing loss early** before speech delays appear
- **Helps plan effective early intervention**

By identifying hearing problems early, parents can begin therapy or treatment that significantly improves a child's speech and learning outcomes.

👩‍⚕️ About Sagar Speech & Hearing Clinic, Sagar (M.P.)

Sagar Speech & Hearing Clinic is a trusted center for **comprehensive hearing and speech services**.
We are located at **Hotel Ashoka Lake View, First Floor, Parkota, Sagar (Madhya Pradesh)** and offer advanced diagnostic tests including:

- OAE (Otoacoustic Emission) Test
